

# DORO®

## NAVIGATION ADAPTORS

To ensure a secure and accurate navigation-assisted operation, navigation systems are dependent on important requirements:

- They have to be stable, so that a precise reference point is guaranteed but flexibly adjustable as well.
- The reference frame must be high enough to be captured by the camera and simultaneously close to the surgical site.
- Also they must be small-sized to allow intra-op imaging.

**DORO® Easy Connect Navigation Adaptors** and **DORO® Navigation Adaptors Radiolucent** are designed to comply with all these requirements in a very effective manner.

### DORO® NAVIGATION ADAPTORS

- Connect directly to the integrated navigation starburst on the Quick-Rail® of the **DORO® QR3 Skull Clamp**, **DORO® Multi-Purpose Skull Clamp** and **DORO® Skull Clamp Teflon®**.
- Provide a very stable and secure connection of the navigation interface.
- Allow to position the navigation interface close to the surgical target.

Please find further information on the product's web page.
